

DGE – Dr. Ing. Lothar Günther Engineering GmbH – Lutherstadt Wittenberg

Press Release 04-07

on the worldwide application of protected rights and know how of the DGE - Dr. Günther Engineering GmbH Lutherstadt Wittenberg in the fields of gas processing, the further processing of these gases to highly purified natural gas or methane qualities and marketable liquid hydrocarbons

DGE GmbH has protected rights and the corresponding know how for the economic processing of flare gases from the mineral oil and natural gas production as well as the further processing of prepared high-purity gas qualities to LNG (liquified natural gas) and liquid fuels. The company`s technologies are already used for the processing of biogas to highly purified bio natural gas qualities.

There is a great international demand for such economic methods. Investors from the gulf region would like to process the flare gases arising during the natural gas and mineral oil production to marketable gas qualities, transform it to LNG if required for offering on the world market or producing liquid fuels on this raw material base. These gases get flared off at present and therefore pollute the environment substantially. A worldwide processing of these flare gases would be of outstanding importance for the solution of the climate problem. In addition, the raw material reserves could be used longer and more effectively.

While seeking for effective technology, investors from the gulf region got aware of DGE GmbH and its managing partner, Dr. Lothar Günther. After extensive enquiries they have decided to acquire the corresponding licences for using the protected rights, safeguarded by patents, and the know-how. With a licence agreement, AGAC LLC will secure itself the rights for a worldwide application of technologies for the processing of flare gases. Another object of agreement becomes the application of protected rights and know-how for the processing of biogas to biomethane for regions that are not assigned by DGE GmbH yet (Gulf Region, Africa and Australia).

The new founded Arabian Gas Production Company (AGAC) which belongs to the Bashraheel Investment Group in Saudi Arabia becomes licensee. Chairman of this group is Sheikh Fawaz M. Bashraheel.

On request of the investor, the main equipments for the plant complexes are delivered by the German partner. By that the licensee expresses confidence in German quality work and certainly would like to exploit the “made in Germany” predicate on the markets.

The DGE GmbH Wittenberg will extend its engineering capacities and enlarge the cooperation with efficient enterprises of the plant building sector.

Within the next weeks, the partners will conjointly select and fix locations for the construction of first plants for processing flare gases in the gulf region. The erection of the first plant will start immediately.

The partners agree on silence on the terms of the prepared contracts as regards content.

Lutherstadt Wittenberg, 22.08.2007
